Healthcare: 50%	Science + Technology: 16%	Other: 2%
Academic: 15%	Civic: 17%	

Firm Philosophy:

We are an international architecture and engineering practice with strong, local roots. We take to heart our responsibility to improve the communities in which we live and work. Through a highly participatory and respectful design process, we create architecture that is both proud and humble, stays true to its purpose, and provides a sense of place that is meaningful to the people and the community it serves. Our shared commitment to excellence has allowed us to become industry leaders in healthcare design, science and technology, and civic architecture. As a full-service A/E practice, our design teams have successfully led projects ranging from state-of-the-art laboratory and medical facilities, to cultural centers including centers for fine and performing arts, to athletic centers including stadiums and sports training/wellness facilities, to office interiors and corporate headquarters. Our clients range from major academic research institutions, to city/state governments and federal agencies, to private commercial and corporate owners. Our firm-wide resources and depth of design and project management expertise allows us to practice intelligently, confidently, and creatively, regardless of the project location. Whether our commissions are based in the Nebraska Sandhills, in the Chicago Loop, on

the Colorado Front Range, or in the Persian Gulf, we approach every project with the same vigilance to client service and passion for design excellence.
